

# Every proton entering into the highly curved Neutral Zone<sup>C-R</sup> dreams:

I think I'll just take a short nap on this hammock for a little while.

Moral: Particles in the Neutral Zone<sup>C-R</sup> are trapped, napping, confined in their own space, unable to sense, much less interact with their neighbors. This includes photons and neutrinos, as well as protons, neutrons, and possibly some stray electrons.

Technically: Time does not exist in the Neutral Zone<sup>C-R</sup>, so no speed-of-light interactions are possible.

Note: Gravity is curvature based, and still exists outside the Neutral Zone<sup>C-R</sup>. Note also: All particles and energy-waves still exist and have all their original properties intact, but they cannot interact on their properties while they are confined - napping.
